SOFTWARE ENGINEER

Francesco Vicidomini

Software Engineer with 6+ years of professional experience delivering complex web applications for cybersecurity, European research, and public-sector services. Strong in problem solving, software design, REST integrations, testing, and technical ownership. Professional expertise is centred on TypeScript and Angular; Python experience comes from hands-on projects including a Flask API and an NLP-based Master's thesis, supported by solid computer-science foundations and a practical learning mindset.

TECHNICAL SKILLS

Programming & Back-End

Python (projects) · Flask · REST APIs · Object-Oriented Design · Data Structures & Algorithms

Web Engineering

TypeScript · JavaScript · Angular · React / Next.js · Node.js · WebSocket · HTML5 / CSS3

Data & Quality

MongoDB · MySQL · Jest · React Testing Library · Playwright · Unit & E2E Testing

Delivery & Collaboration

Git / GitLab · Docker · CI/CD · Agile Scrum · Code Review · Mentoring

LANGUAGES

Italian	Native
English	B2

I authorize the processing of my personal data in accordance with Regulation (EU) 2016/679 (GDPR).

PROFESSIONAL EXPERIENCE

Software Development Specialist

Jul 2023 – Present

Engineering Ingegneria Informatica · Naples, Italy

- Own software design and end-to-end front-end implementation for cybersecurity platforms, defining application structure plus REST and WebSocket contracts with back-end engineers.
- Translate unfamiliar domains such as privacy risk and Digital Twins into maintainable workflows, applying structured analysis before selecting an implementation approach.
- Diagnosed repeated server-side calculations in an existing system and guided an optimization that improved API response times while preserving expected results.
- Work across Angular, TypeScript, RxJS, NgRx, Nx, Spring Boot services, MongoDB, Docker, authentication, and CI/CD to investigate defects across system boundaries.
- Plan delivery through GitLab Issues, review code, coordinate up to two colleagues, and communicate solutions in English with international technical stakeholders.

Software Engineer

Jun 2020 – Jul 2023

NTT DATA · Naples, Italy

- Developed a large Angular and TypeScript platform integrated with Spring Boot REST services and MySQL to digitize administrative processes.
- Analysed a legacy codebase and introduced reactive validation, reusable modules, and shared components, reducing duplication and making new workflows faster to implement.
- Designed the integration of a major module by modelling actors, permissions, restricted areas, API interactions, and reusable versus domain-specific components.
- Coordinated a three-person team through task decomposition, implementation support, and code review in an Agile Scrum environment.
- Worked directly with client stakeholders to clarify ambiguous requirements and turn complex rules into reliable, easy-to-complete user journeys.

SELECTED PROJECTS

Knoxly

Master's thesis · Università degli Studi di Salerno

Designed a privacy assistant for Telegram Web and Gmail. Implemented a two-stage text-classification pipeline using multilingual sentence embeddings and topic-specific sensitivity classifiers, exposed the model through a Python Flask REST API, and integrated it with a configurable Chrome extension.

Technologies: Python, Flask, REST API, TensorFlow Hub, Multilingual Universal Sentence Encoder, NLP, Text Classification

SELECTED PROJECTS

MyFiscalCode

Personal project

Built and deployed a cookie- and tracker-free Italian tax-code calculator. Designed the Next.js flow across Server Components, a validated Server Action, a MongoDB-backed autocomplete API, and a React client form; added Italian/English internationalization and automated unit, component, API, and cross-browser end-to-end tests.

Technologies: Next.js, React, TypeScript, next-intl, MongoDB, Mongoose, Jest, React Testing Library, Playwright, Docker, Vercel

EDUCATION

Master of Science in Computer Science — 2018 – 2020

Università degli Studi di Salerno · Salerno, Italy

Grade: 110/110 cum laude

Bachelor of Science in Computer Science — 2013 – 2017

Università degli Studi di Salerno · Salerno, Italy

Grade: 94/110

ADDITIONAL PROJECTS

FrancescoVicidomini.dev

Personal website evolved from Angular to React and Next.js, deployed on Vercel through continuous delivery.

Next.js, React, Angular, TypeScript, Vercel

ShareErasmus

Erasmus platform developed while acting as project manager for a team of eight people.

Node.js, MySQL, Firebase, Jest, AWS

YASPL3

Designed a custom programming language and implemented its compiler in Java SE.

Java SE, Compilers, Language Design

N-body Simulation

Parallel and concurrent N-body simulation with AWS cluster configuration and performance testing.

C, OpenMP, AWS EC2
